

## **Acohol Vinegar with 16.5% Acidity and Higher**

Save shipping and storage costs! Both can be reduced by 27% if you store and ship vinegar with 16.9% acid instead of 12%. The necessary equipment based on recent Frings developments, and a new bacteria culture for the single stage, high-strength fermentation process are available at very attractive prices. In some instances even the separate nutrients dosing system may be omitted. The process is, therefore, equally interesting for Acetator plants which are advanced in years.

If you are in a position to invest into a new vinegar plant, the acidity limit goes up dramatically: the present world record, coupled with the usual high productivity, is 18.49% based on the single high strength process.

For even higher acidities, Frings can offer the dual stage high strength process. At several production sites, vinegar of 20% acidity is produced!

Interested? Please send us your e-mail or telefax inquiry.

## **New Catalogue for Frings Fittings**

In this newly designed Frings catalogue you will find the traditional high quality Frings fittings with the standard Frings thread and with other frequent thread types, made of food-grade PVC and of stainless steel. We will be pleased to send you the catalogue on request.

## **Choose your Frings Partner**

You are calling Frings on the central line ++49 228 98330, and you only get the answering machine. Why not try to reach your preferred Frings partner by dialling her/his direct line:
